## DETAILED ACTION

### *Terminal Disclaimer*

1. The terminal disclaimer filed on 12/28/05 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of copending Application No. 10/225,549, copending Application No. 10/751,822, and copending Application No. 10/787,924 has been reviewed and is accepted. The terminal disclaimer has been recorded.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bedingfield et al. (U.S. Patent No. 6,714,639) in view of Lemke (U.S. Patent No. 6,813,344).

Regarding claim 1, Bedingfield et al. teach an improved decoding and processing system for advanced determination and display of geographic information of a call origination party, said system comprising: a) a switch having means for receiving a CND message from a call origination party, said message containing call identification data from a signal derived from communication network (Fig. 5, 308); b) server means for storage and retrieval of specific data

Art Unit: 2642

from a data base library for selectively determining the corresponding geographic information of said CND message received from the call origination party (Fig. 5, 502a-d); c) means for transmission of said corresponding geographic information for reception by a telephone (column 8, line 1); and d) a readout device for displaying the geographic information of the call origination party (column 8, lines 1-6). The difference is that the claimed invention includes a mobile switching center. However, Lemke teaches a method and system for providing information for identifying callers based on a partial number wherein the caller identification system can be integrated into a cellular phone (column 2, line 22 to column 3, line 9). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the use of cellular environment taught by Lemke into the system disclosed Bedingfield et al. in order to expand the benefits of caller ID into a wireless area which has more opportunities arise.

Regarding claims 2-6, Bedingfield et al. further teach the improved system wherein the corresponding geographic information is a city, state, or country identification of the call origination party (column 8, lines 1-6).

Regarding claims 7 and 8, see Fig. 5.

Regarding claims 9-13, see column 8, lines 8-48.
